

LD Top Spray Nozzle

The Glatt LD (*Light Design*) Top Spray Nozzle is specially developed to offer superior handling and reliable processing.

With a 50% weight reduction compared to traditional top spray nozzles, the light and innovative design is easy to handle. The assembly and disassembly, now with fewer parts, can occur without additional tools, making cleaning and set-up an easy task thereby increasing work efficiency with less stress.

The LD Top Spray Nozzle offers a homogeneous and reproducible spraying behavior equal to the traditional Glatt SL Nozzle even with challenging spray solutions. The specially developed design prevents dripping and has a specially designed anti clogging technology. Emptying the nozzle after the spraying process is not necessary which also saves binder liquid.

It is available as 1, 3 or 6 head-nozzle. The nozzle head can be easily changed without tools.

Now redesigned into a light version

The lightweight among the top spray nozzles :

- » Anti-clogging design
- » Unique light design – extremely robust
- » Weight reduction for easy handling
- » Increased process reliability and reduced downtimes
- » Fast assembly and disassembly
- » Extremely easy to clean
- » Quick change over
- » For all Glatt fluid bed systems
- » Can be retrofitted without physical modifications to existing machines
